“Learning to assess research with the aim to optimize returns”

BARCELONA 2013

The International School on Research Impact Assessment

Objectives

- To empower participants on how to assess, measure and optimize research with the focus on biomedical and health sciences
- To impart to participants knowledge about existing frameworks, tools, approaches and the reporting of research evaluations
- To build collaborative capacity, networks and team building among a generation of R+D decision-makers

Audience

Those working on programme management in research and development for government, research funding organizations, not for profits or health industry. The focus will be on biomedicine learning capacities but will be applicable to other disciplines.

Faculty

Faculty members and guest lecturers are international experts in research impact assessment.

Participants should expect to achieve

- A broad knowledge of the state of the art in the ‘science of science’ area of expertise
- Empowerment and skills in the planning and development of assessment studies, in reporting and implementation
- Opportunity to network and exchange best practices with peers from around the world

Programme

The programme will combine lectures, key-note presentations, case-study lessons, parallel sessions, tutorials and team work. The contents will cover:

- Theoretical background and frameworks
- Methods, data collection and tools
- Delivering research impact assessment
- Effectively communicating findings

Participants will develop a research impact assessment plan for a programme relevant to their organization
